

Backup & Disaster Recovery

Frightened about losing your company's valuable data?

Concerned your business will be down for days in the event of a server failure?

Anxious that your backup retention period is too short?

Gibraltar provides scalable Enterprise-class data backup protection that is designed to meet your needs, budget, and compliance regulations.

Gibraltar offers an industry leading Backup Plan for our Peace of Mind Clients:

The **Full Disaster Recovery Service** adds true Disaster Recovery capabilities by storing the backups on a local BDR device, and replicating to a BDR device in the cloud. Server images can be stood up on either BDR device, resulting in recovery times in minutes instead of days. Retention times can be increased depending on business needs and regulations/compliances.

Gibraltar will work with you to ensure your Recovery Time Objective (RTO) and Recovery Time Actual (RTA) are in line with the needs of your business. Our network operations team monitors your backups and provides testing and verification to ensure that your backup files are stable. We work with our clients to ensure that backup frequency is set to the needs of the business.

The end result? Increased safety, security, and availability of your data. Reduced impact of hardware failures and software issues. **Peace of mind.** Contact us today and learn about the Gibraltar difference!

The Gibraltar Difference

Data Availability

-  Backups stored locally and in the cloud
-  Server images can be stood up on local device or in the cloud
-  Recovery times in minutes instead of days

Data Security

-  Image based backups of servers
-  Backup monitoring
-  Backup verification

Customizable Plan

-  Adjustable backup frequency
-  Adjustable retention policies
-  Scalable solution as your business grows
